

Automate ticket handling fast Today!

Now you can streamline your office and never have to concern yourself with load counts on truck hauls again. Be able to track cubic yards, material type, site locations, scan operators names and much more. Also with each scan there is a date and time stamp to the second which will give you complete control of your operations .

At DTSystems, Inc. we have the solution you've been waiting for. Give us a call and speak to one of our account executives, or visit our web site at . . . www.keepontracking.com .

The DTSystems VISION

For general contractors, trucking companies, and all material moving companies, tracking inventory as it is hauled has become more and more necessary. With this in mind, DTSystems™ has developed the Data Track System™. This first of its kind custom database technology allows you to generate all of your detailed load reports at the touch of a few buttons. Eliminate unnecessary data entry personnel and cumbersome three part tickets and start to streamline your operation today!

The Data Track System™

The Data Track System™ uses a portable laser scanner to identify each truck in your hauling operations. Here's how it works. Each truck in your fleet will carry a tiny device the size of a dime called the **ibutton™**. The **ibutton™** carries a unique 15 character alpha numeric number relevant to your company. As trucks load and dump material, your hand held scanner just touches the **ibutton™** and gathers delivery information in an instant! Participating companies have immediate access to a universal data network by logging on to the DTSystems™ website at www.keepontracking.com. You have complete control of your office data as you print reports at the end of each day. Think of it, knowing your load count instantly!

OUR COMMITMENT TO YOU..

At DTSystems™ we offer many exciting benefits that come with the Data Track System™ and here are just a few:

- ◆ 1-year free tech support.
- ◆ Complete in-service instruction.
- ◆ Annual service plan with free internet updates and software upgrades included.
- ◆ Dual purpose Laser scanners will scan tickets as well as the **ibutton™**.
- ◆ Bar coded tickets are customized for your company.

The new Quarry **Module™** gives you the ability to scan weigh-scale tickets from cooperating quarries while still tracking your own tickets for hauling operations. Call for information today!
